More than half of US pro sport venues use comms software

You are here: Home / News / More than half of US pro sport venues use comms software

June 27, 2013 **Tags:** fan experience, safety management

ISS 24/7 has reached a new milestone with over 50% of the National Football League (NFL), National Hockey League (NHL), National Basketball Association (NBA), and Major League Baseball (MLB) sports facilities now using its facility management and text messaging communications software.

In 2008, **ISS 24/7** released the first version of its two-way text messaging software to the Miami Dolphins. Following the recent acquisition of the Los Angeles Angels and the Los Angeles Dodgers, ISS 24/7 is now the provider of facility management and text messaging communications software to over 50% of the four major professional sports leagues in the United States. said Scott Meyers, Vice President, Sales and Marketing, said:

“We developed a strategy early on to make every new client a member of our development team. We understood that the direction of our software should be guided by the best minds in the industry. After all, it’s the stadium operators that know best what is needed and wanted to help manage their buildings and events.”

ISS says that it encourages a permanent relationship that cultivates feedback and recommendations from clients and industry experts to help it develop the intuitiveness of the software, its ability to improve communication and reduce risk for facilities and venues.

In addition to its presence in over 50% of the four major professional sports leagues, ISS 24/7 software is now implemented in over 50 National Collegiate Athletic Association (NCAA) stadiums and arenas, and over 90% of the tracks where the National Association for Stock Car Auto Racing (NASCAR) Sprint Cup Series races are held. ISS 24/7 has also supplied venues outside the USA such as the Air Canada Centre in Toronto and the O2 Arena in London.

The Miami Dolphins organisation was the first to use ISS 24/7 software.
